

# **From strategies to activities - Bioenergy Promotion**

International Conference • Latvia • Riga • 18 October 2013

Europe is becoming increasingly dependent on imported fossil fuels.

Under the "business as usual" scenario, the EU's energy import dependence will increase from 53% of total EU energy consumption in 2005 to 67% in 2030.

Reliance on imports of gas is expected to increase from 58% to 84% by 2030, and on imports of oil from 82% to 95%.
